**Support the entire exam cycle,
from question development to
post-exam analysis.**

Introduction

Remindo is a leading digital assessment and examination platform that supports the entire testing cycle—from question development and test construction to administration and analysis. The platform is widely used in vocational and higher education, educational publishers, and the corporate sector.

Remindo consists of two environments: one for management and another for test-taking. In the test-taking environment, participants answer test questions, graders assess responses, results are reviewed, and detailed analytics are provided on both the test and individual questions.

In the management environment, the question bank is built, and tests are prepared. Questions can be developed through controlled workflows and user permissions, ensuring a safe and collaborative process involving multiple reviewers.

Additionally, Remindo provides a secure platform for all roles—such as authors, administrators, examination offices, invigilators, and teachers—to develop and administer both formative and summative assessments.

The following pages provide an in-depth overview of Remindo and its wide application.

If you have any questions, please contact us at support@paragin.com.

Create your own question bank

Conduct assessments in a safe digital environment

Provide targeted feedback per student or assessment

The solution

Remindo is designed to support the full assessment cycle, offering solutions for assessment creation, delivery, and analysis. Learn more about how to make the most of these features.

Exam development

Exam administration

Assessment analysis

Exam development

Creating high-quality assessment materials is essential for ensuring the quality of education and evaluation. Remindo offers versatile and user-friendly tools for assessment development.

Benefit from a wide range of question types for diverse learning objectives

This environment supports a wide range of questions, including open text, file upload, hotspot, and multiple-choice.

Users can also create more complex question formats, such as drag-and-drop, matching, fill-in-the-blank, and math-based questions. These formats can be easily combined. Additionally, images, video, and audio clips can be added. This makes Remindo suitable for both simple knowledge questions and complex multi-step questions.

Easily categorize questions in the question bank

Quickly locate and manage questions using a structured and flexible system. The question bank uses a hierarchical category structure, allowing questions to be linked to specific categories or subcategories for quick retrieval. A single question can be assigned to multiple categories while being stored only once in the database.

The system supports both summative and formative questions, with built-in safeguards to ensure summative questions aren't mistakenly used in formative assessments.

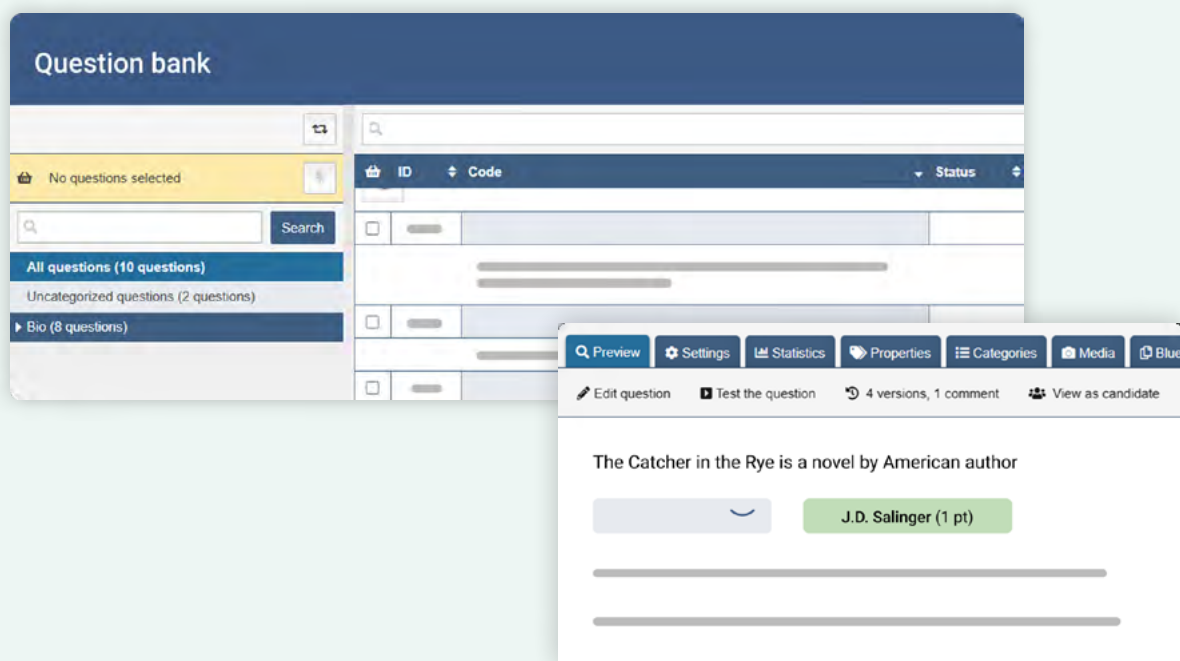

Ensure quality with the four-eyes principle

The four-eyes principle is key in developing questions and assessment blueprints within Remindo. This workflow ensures that a second person carefully reviews every question and assessment if desired.

The assessment application also enables tracking every change step-by-step, providing feedback, and restoring previous versions when necessary. These features promote a transparent workflow, enabling authors to collaborate effectively and safeguard the quality of assessment content.

Flexible permission management for a secure working environment

Remindo offers a flexible permissions structure, allowing administrators to precisely control who can view and/or edit questions and assessments within the platform. That makes managing tasks like selecting questions for evaluation without granting editing rights, simple and easy. All of this supports a secure and well-organized working environment where tasks are clearly defined, and quality control is effectively maintained.

Exam administration

Planning and conducting assessments and exams is easier than ever. Educational institutions now have the tools to design tailor-made assessments flexibly, ensuring optimal support for both teachers and students.

Effortless exam planning

Great flexibility for scheduling means that administering assessments and exams is effortless. For example, students can be added to a test schedule ahead of time, but the exact order of steps may vary based on the organization's preferences.

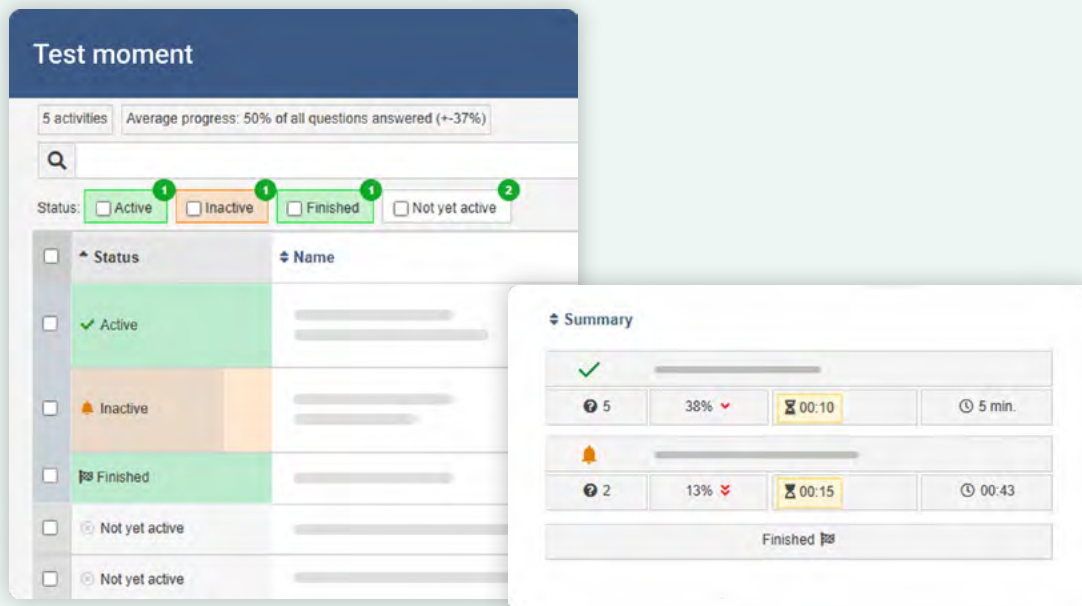

During the planning phase, institutions define the details of the exam—such as date, time, and participants—so that a tailored schedule is made available to both students and instructors.

A similar scheduling approach can be used for review moments of achieved results. Just like exam delivery, these review sessions can take place in a secure environment.

Real-time monitoring during exams

Student progress during an exam can be monitored in real-time via the activity dashboard. This overview shows who is logged in, who has already started, how much time they have left, and even which question they are working on. This gives teachers and invigilators complete visibility into the exam process.

You can also grant extra time to specific students. These adjustments can be made easily within the activity dashboard, ensuring fair exam conditions for all.

A comfortable experience for every student

Exams should be accessible to all students. To support this, learners can personalize their screen—for example, by enlarging the font, adjusting contrast, or activating a text-to-speech function.

These accessibility features enable students with visual impairments or other needs to take exams comfortably. Remindo ensures that these settings can be easily applied without compromising student privacy.

A secure exam environment

Security is crucial when administering summative assessments. Integrations with systems that support this security, such as Schoology and Safe Exam Browser ensure

students cannot access other websites or applications during the exam. Additionally, remote proctoring allows secure online monitoring through the webcam via proctoring software integrations, such as Proctorio.

In the event of a temporary internet outage, all responses are safely stored and submitted once the connection is restored.

You manage exam deliveries through the activity dashboard by granting or revoking permissions. Any incidents can be logged, and an exam can be terminated if necessary.

These measures ensure that exam delivery is not only fair but also reliable and secure—essential for both students and educational institutions.

Assessment and examination are essential components of the learning process—not only to measure what students or candidates know but also to improve the quality of education continuously. With Remindo's assessment analysis, educational institutions gain in-depth insights into exam results, enabling them to implement data-driven improvements. This helps refine exam questions and optimize overall test quality.

Analysis as a foundation for improvement

Through our platforms, institutions can conduct detailed analyses that go beyond simply marking answers as right or wrong. Our analytics tools allow educators to see exactly how individual questions are answered, how groups perform on different topics, and how specific subjects within a test are scored. This makes it easier to identify curriculum weaknesses and improve test questions quality.

In addition, users can review the history of past assessments to analyze question content and reuse if desired. This allows for

continuous improvement of exam questions based on earlier test sessions.

Targeted group evaluations for better support

Our tools also enable institutions to evaluate results at the group level, providing insight into how different classes, cohorts, or student groups perform on specific topics. Comparing group performances helps identify patterns, such as which subjects are more challenging for certain groups or which teaching methods are most effective. This feature enables institutions to provide more targeted support to their students.

Increase the reliability of exam sessions

In addition to content analysis, Remindo provides insights into the entire assessment process. Institutions can examine whether errors occurred during the exam, such as incorrect instructions or technical issues. Cases of fraud can also be investigated, and the overall integrity of the assessment process can be verified. This process analysis contributes to more reliable and fair testing procedures.

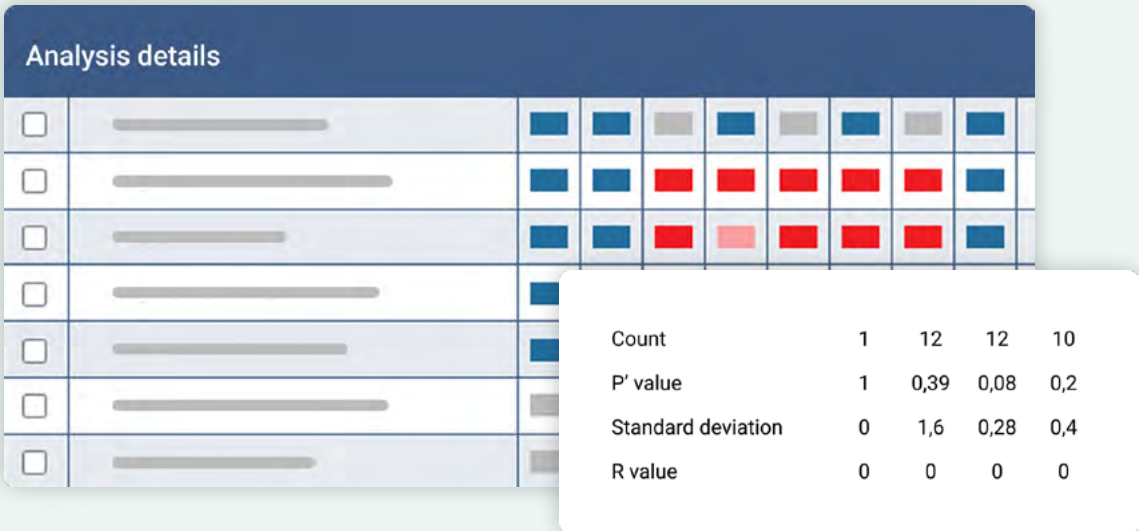

If analysis shows that students have not studied a particular chapter, the related question can be modified or removed.

Based on the analysis, questions can be revised. Every change is logged, so it is always clear what was changed and by whom.

Optimize exams and questions for better results

Remindo makes it easy to examine the performance of individual questions closely. Users can see how often a question was answered correctly or incorrectly and by which student groups. This enables teachers to determine whether a question is too easy or too difficult and whether it aligns with the intended learning objectives.

Remindo also provides insight into the time students spent answering each question. These detailed analyses support

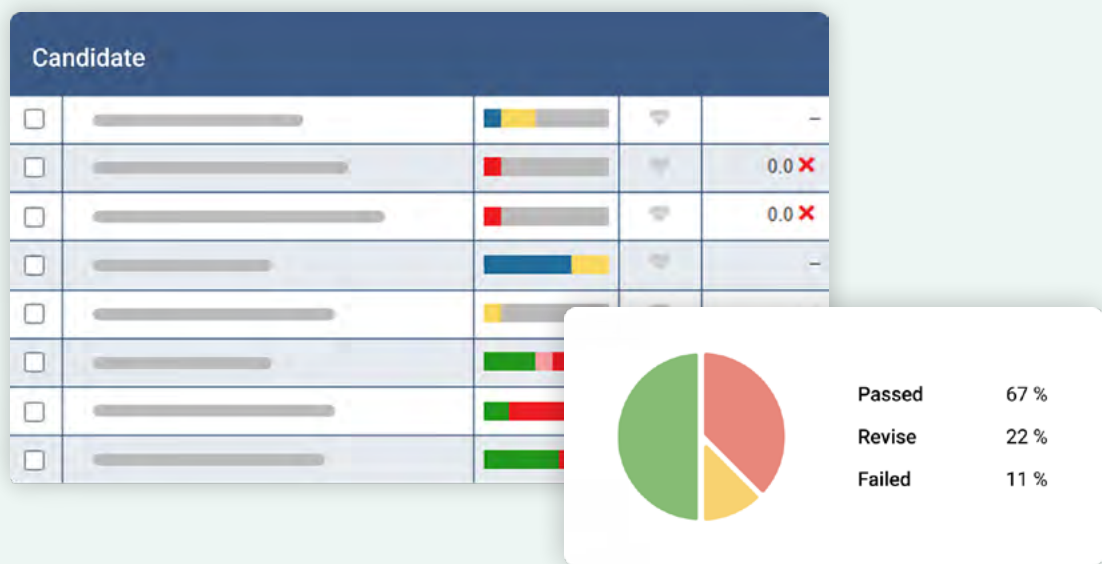

continuous improvement of exams, resulting in a more effective and fair assessment process.

Advanced psychometric analyses

Institutions perform advanced psychometric analyses in Remindo. These analyses link back to the item bank, triggering alerts when questions fall outside expected parameters. This ensures that test items meet quality standards and helps maintain a balanced and valid item bank.

Transparency and accountability in the assessment process

Remindo offers comprehensive audit reports that log all user actions. Users can consult logs and insights to investigate what went wrong and how the assessment process went. This provides valuable information for continuous improvement and ensures transparency throughout the assessment process.

Our certifications guarantee security and privacy.

Suitable for

Remindo is a versatile exam platform that can be used for multiple purposes. Here you can learn how Remindo can support your specific needs.

Vocational education

Develop and administer exams smartly and securely

Secondary vocational institutions receive a complete and secure solution for creating, managing, and administering exams. Exam quality and student performance remain transparent and measurable with real-time learning analytics and psychometric analysis.

Easily create exam materials

Remindo provides tailored solutions for secondary vocational institutions to create, manage, and distribute exams. This allows you to develop questions and tests effortlessly and securely distribute them across different classes and locations.

The platform ensures that all exam materials are well-protected, and that exam management is precise, so questions and answers always remain secure.

Deliver the highest quality in exam materials

Remindo offers real-time learning analytics at both the exam and student levels, including psychometric metrics such as P' and A values, RIT, RAT, RIR, and Cronbach's alpha. Answer keys can be adjusted afterward, with immediate insight into how corrections affect student results.

After an exam is completed, analytical data is sent directly to the management environment, where psychometric analyses and comparisons can be made at both the item and group level.

Administer exams securely

Remindo supports exercises, practice tests, and summative assessments, suitable for both large-scale and small-scale exam sessions. Exams are conducted in a secure web-based environment with complete control over security settings.

Share results online, and schedule exams or review sessions at a fixed time or within a defined time window. Invigilators and instructors can monitor the exam session in real-time through the activity overview, send messages, and track student progress.

Remindo can integrate with student information systems!

It is possible to create an integration between Remindo and a student information system, possibly including a scheduling application as well. This saves time, reduces errors, and speeds up the processing of exam results. Students receive quicker feedback, while teachers and administrative staff work more efficiently.

Exam providers

Save time with automated exam scheduling

Effortlessly and efficiently deliver exams to organizations, schools, and businesses. Our platform provides a customized testing environment, complete control over content and configuration, and powerful analytics to ensure high exam quality—all while significantly reducing costs.

Optimize exam delivery

You can easily deliver assessments and exams to multiple organizations, schools, and companies. Each institution receives a customized testing environment while you retain complete control over its structure and content. This allows you to develop specific exam blueprints and deliver them directly to the right target audience.

Save time and effort

Remindo takes care of the entire planning process. You can delegate this to the school or client, saving you time and effort as a provider. A clear role-based structure gives the right people targeted access without unnecessary distractions. This keeps everyone focused on their core tasks, leading to a more efficient and effective exam process. Additionally, you gain flexibility in supporting schools by easily adapting processes to meet their specific needs.

Gain insight into exam quality

Thanks to our powerful analytics tools, you gain immediate insight into the quality of your questions and participant performance. You can monitor pass rates and conduct in-depth analyses at the question level. This enables you to compare evaluators and identify trends in exam results.

Seamless integration and process optimization

Our platform features a flexible API that easily connects to existing processes, allowing seamless integration with other applications. You can also tailor the entire exam delivery and processing workflow to your needs as an exam provider. This gives you next-level control, with deep insights into results and optimized, efficient workflows.

Higher education

Control over assessments: from development to analysis

You can easily create assessments and exams using a variety of question types and advanced scoring options, giving you full control over assessment quality and cut-off scores. Thanks to real-time analytics and a secure testing environment, you can monitor results, make timely adjustments, and continuously improve the quality of your question bank.

Design your own assessments

Remindo supports the entire process of question development and blueprint design. Create multiple-choice, hotspot, open questions, and more. Enhance your questions with case studies, images, videos, and audio clips.

Build assessments and exams using multiple question banks—either randomly or with a fixed set of questions. Set scoring and cut-off points, including flexible score thresholds with multiple breakpoints.

Remindo can automatically adjust for guessing and change by guessing probability correction. The platform also offers extensive options for grade calculation and cut-off settings, allowing you to stay in control of your assessments.

Administer exams securely

Remindo supports exercises, practice tests, summative assessments, and exams—all within a secure digital testing environment. All testing takes place online (web-based), giving you full control over security measures.

Results can be shared online, and both exams and review sessions can be scheduled at fixed times or within designated time windows. Through the activity dashboard, invigilators and instructors can monitor exams in real-time, send messages, and track student progress. You can also flexibly assign user permissions, making collaborating across departments or courses easy. This allows you to organize assessment development and management on a broader institutional level.

Real-time analytics

The platform offers real-time learning analytics at both the test and student levels, including psychometric indicators such as P' and A-values, RIT, RAT, RIR, and Cronbach's alpha. After the assessment, the cut-off score can be fine-tuned using methods like Cohen-Schotanus.

Answer keys are corrected retrospectively, with immediate insight into how these changes affect student results. Once assessments are completed, analytical data is sent directly to the management environment, enabling item-level psychometric analyses and comparisons.

Group analyses can also be conducted to compare student performance. These insights help improve the quality of your item bank, making your assessments increasingly reliable and effective.

Business

Optimize assessment and learning outcomes with flexible exam delivery

Design and manage exams that align perfectly with specific learning pathways. Create tailored testing environments and enrich questions with various media to enhance the learning experience.

Maximize assessment and learning efficiency

Develop exams fully aligned with tailored learning journeys—using questions drawn randomly or selected from predefined sets across multiple question banks.

Remindo supports the entire process of question development and test matrix design. Create various question types, including multiple-choice, hotspot, and open questions. Enhance your questions with case studies, images, videos, and audio clips.

Create your own exam environment

Our exam environment offers the flexibility to build custom testing setups for different organizations. Whether you use your own learning platform or specific e-learning modules, Remindo enables seamless integration and customization of the exam process to meet your clients' needs. Integration is possible through standards like LTI, allowing you to deliver personalized solutions and elevate the learning experience.

Healthcare

Flexible and secure examination with adaptive assessments

Remindo provides a flexible and secure exam environment for organizations and educational programs in the healthcare sector, enabling seamless integration of assessments into existing learning platforms. With advanced analytics and adaptive testing capabilities, Remindo supports educators in gaining insight into learning performance and driving targeted improvements.

Create your own assessment environment

Our platform offers the flexibility to create customized exam environments tailored to the needs of different organizations. Whether you use your own learning platform or specific e-learning modules, you can seamlessly integrate assessments and align them with your clients' needs. Integration via the LTI standard is also possible, allowing you to deliver personalized experiences and enhance the learning journey.

Easily configure questions in Remindo

Remindo allows you to assign specific properties to questions—such as an “I don’t know the answer” option—enabling you to identify exactly which content students have already mastered.

Remindo includes essential features such as reducing guessing chances and supporting adaptive testing.

Administer exams securely

Remindo supports exercises, practice tests, summative assessments, and exams—all within a secure digital testing environment. It’s suitable for both large-scale and small-scale assessments. All testing takes place fully online (web-based), giving you full control over security measures.

Comprehensive analytics

Group-level analyses help instructors quickly identify which areas are well understood and where improvement is needed. This makes comparing student performance with peers and viewing group averages easy. Educators also gain a clear overview of how well various topics are mastered across different academic years.

Remindo offers real-time learning analytics with psychometric indicators such as P’ and A values, RIT, RAT, RIR, and Cronbach’s alpha. Cut scores (pass/fail thresholds) can be determined retrospectively using methods such as Cohen-Schotanus.

Testimonial

”As an organization by and for vocational education, our mission is to ensure students are well-prepared for the workforce with strong foundational skills. In four years, we’ve developed over 200 exam products and administered more than 250,000 assessments across 500 locations using Remindo.

With Remindo, we can generate detailed reports, implement API connections, and continue enhancing our exam products. Everything is included—from blueprint design to delivery. Large-scale digital exams are now easily achievable.

Any disruption is one too many, but with Remindo, we have peace of mind. I highly recommend it to other assessment organizations and companies seeking a comprehensive digital exam platform.”

Erik Degen, Director, Coöperatie Examens MBO

Ready to innovate your assessment process?

Remindo is a comprehensive exam platform that supports the entire exam cycle, from question development and administration to thorough post-exam analysis. We would happily demonstrate how our software can add value to your institution.
